surgical and dental professions

Hogies Plus Eyeguards

# Hogies Plus Eyeguards See the difference

Protective eyewear from the Hogies range has always given dental practitioners uncompromised safety and integrity whilst remaining lightweight and stylish.

The new Hogies Plus Eyeguard range has been improved with additional features including:

- Adjustable nosepiece for maximum comfort.
- Resilient water repellent coating to protect the lens.
- Enhanced scratch, fog and solvent resistance on both sides of the lens.

The ophthalmic-quality polycarbonate lens provides the clear vision essential for successful treatment and ensures eyes are protected from harmful flying debris and liquids.

The Hogies Plus nose bridge is made of medical grade silicone, reinforced with stainless steel, giving it maximum adjustment for comfort and suitability for all facial characteristics. The Hogies Plus Eyeguard gives unrivalled comfort and optimal airflow to prevent lens fogging. Combined with the range of colours available to suit all tastes, Hogies Eyeguards remain the ultimate in clinical eye protection.

## The Hogies Sunguards range

All with Black Temple Bar

Grey/Blue/Purple Revo	Vermillion/Flash	Yellow/Blue/Flash
-----------------------	------------------	-------------------

# Hogies Sunguards

Sunguards provide full protection from UV light with no visual distortion. Sunguards are available in a range of vibrant lens colours finished with a mirror flash.

# The Hogies Loupe System

This is probably the most versatile system on the market, with each component built to the most exacting standards.

The frames provide a stable platform for prescription lenses (if required), eye protection, magnifying loupes and auxiliary illumination. The loupes are extremely high quality with an excellent field of vision, depth of field and simple adjustment to meet your specific requirements.

## Hogies Miniscope loupes

available in 2.5x magnification and 3x magnification, working distance 42cms.

Frames and loupes available separately.

You can choose to add illumination to your system ...this can be used with or without magnification.

Prescription lenses and loupes are fixed to the frames by simple, but highly effective magnetic connectors, making the whole system not only versatile but a joy to use.

## Loupes and Posture

One of the great long term benefits of using our Loupe System is that they will improve your posture. Many dentists inadvertently slouch when they are treating patients and this, of course, can lead to back and neck discomfort. With loupes you work 42cms from the patient ensuring your back is kept straight throughout treatment.

## Hogies Visors

...combine lightweight and full face protection in a fashionable presentation. These provide superior, inexpensive protection against bio aerosols and debris generated during clinical work.

Hogies visors are fully adjustable and easily integrated with most prescription spectacles.

Hogies visors are available in seven exciting colours to compliment surgery and corporate colour themes.

Frames are available in the following colours - Blue, Purple, Red, Pink, Lime, Yellow and White.

Each Hogies visor frame comes complete with 10 disposable shields. Refill shields are available in packs of 10.
